Headboat IFQ NOAA

Dear NOAA,

I am writing today to request that you approve the Exempted Fishing Permit application of the "Gulf Headboat Cooperative" to engage in a voluntary two-year pilot program for up to 20 vessels to test an allocation-based system to save fish and provide better opportunities for anglers and their families.

The Gulf Headboat Cooperative's pilot program provides an opportunity to fish for red snapper and gag grouper under safe catch limits, to accurately report catch to fishery managers and scientists, to reduce waste caused by regulations, and to use their limit of fish in a way that is best for business and the environment.

Sincerely,

Ms. Gail Robinson

Headboat IFQ NOAA

Dear NOAA,

I am writing today to request that you approve the Exempted Fishing Permit application of the "Gulf Headboat Cooperative" to engage in a voluntary two-year pilot program for up to 20 vessels to test an allocation-based system to save fish and provide better opportunities for anglers and their families.

The Gulf Headboat Cooperative's pilot program provides an opportunity to fish for red snapper and gag grouper under safe catch limits, to accurately report catch to fishery managers and scientists, to reduce waste caused by regulations, and to use their limit of fish in a way that is best for business and the environment.

New management of commercial fisheries has put the recovery of the Gulf's fish populations on a path to recovery. However, offshore recreational fisheries have been left behind.

The Gulf Headboat Cooperative offers an opportunity to lead the way for sustainable fishery management in the Gulf of Mexico. The program is a win-win-win for anglers, fish, and new management ideas.

Sincerely,

Mr. Allan Chen

Headboat IFQ NOAA

Dear NOAA,

I am writing today to request that you approve the Exempted Fishing Permit application of the "Gulf Headboat Cooperative" to engage in a voluntary two-year pilot program for up to 20 vessels to test an allocation-based system to save fish and provide better opportunities for anglers and their families.

Outdated management of recreational fisheries causes far more fish to be killed than scientists recommend. This punishes both anglers and the environment. Recreational fishermen need new ways to operate that help restore and sustain fish and better serve recreational fishing businesses and anglers.

The Gulf Headboat Cooperative's pilot program provides an opportunity to fish for red snapper and gag grouper under safe catch limits, to accurately report catch to fishery managers and scientists, to reduce waste caused by regulations, and to use their limit of fish in a way that is best for business and the environment.

The Gulf Headboat Cooperative offers an opportunity to lead the way for sustainable fishery management in the Gulf of Mexico. The program is a win-win-win for anglers, fish, and new management ideas.

Sincerely,

Mr. Carson Morrow
